25. Support and Maintenance

1. Introduction

1.1 What Is Revantage CRM?

Revantage CRM is a **healthcare credentialing management system**. It helps a credentialing team track when doctors (providers) and medical groups (practices) get approved to work with insurance companies (payers).

The system replaces spreadsheets and email chains with one central place to:

- Store provider and practice information
- Track each credentialing application from start to finish
- Collect and store required documents
- Assign tasks and send reminders
- Report on delays, productivity, and compliance

1.2 Business Goal

When a provider joins a practice or a practice wants to bill a new payer, a **credentialing application** must be submitted. This process can take weeks or months. Revantage CRM makes that process visible, measurable, and auditable.

1.3 What This Document Covers

This guide walks through **every module** of the system in simple, step-by-step language. Developers, testers, project managers, and clients can all use this document to understand how the product works.

2. Who Uses This System

User Type	Portal	What They Do
Admin / Credentialing Staff	Admin portal (/sp/login)	Manage all data, cases, documents, emails, reports
Provider (Doctor)	Provider portal (/portal/login)	View application status, upload requested documents
Practice (Medical Group)	Practice portal (/portal/login)	View practice applications, upload docs, see linked providers
Billing Staff	Admin (future view)	Read-only provider readiness
API Consumer	REST API	Mobile apps or integrations for provider data

3. Technology Overview

Layer	Technology
Backend	PHP 8.3, Laravel 13
Frontend	Livewire 4, Blade templates, Bootstrap admin theme
CSS Build	Tailwind CSS 4, Vite
Database	SQLite (development) or MySQL (production)
Authentication	Session-based (Admin + User guards), Laravel Sanctum for API
Permissions	Spatie Laravel Permission (portal users)
Notifications	PHP Flasher (toast alerts)
Email	Laravel Mail

3.1 Project Folder Structure

app/Livewire/	? All UI pages (Admin, Provider, Practice, Auth)
app/Models/	? Database entities
app/Services/	? Business logic (dashboard, SLA, email, reports)
database/	? Migrations and seeders
resources/views/	? Blade templates
routes/	? web.php, api.php, console.php
docs/	? Project documentation
public/	? Web assets and uploaded files

4. Getting Started (Installation)

4.1 Requirements

- PHP 8.3 or higher
- Composer
- Node.js and npm
- SQLite or MySQL database

4.2 Step-by-Step Setup

Step 1 — Install PHP dependencies:

```
composer install
```

Step 2 — Environment file:

```
cp .env.example .env  
php artisan key:generate
```

Step 3 — Database migration:

```
php artisan migrate
```

Step 4 — Seed default data:

```
php artisan db:seed
```

Step 5 — Optional email templates and SLA rules:

```
php artisan db:seed --class=Phase2Seeder
```

Step 6 — File storage link:

```
php artisan storage:link
```

Step 7 — Frontend assets:

```
npm install  
npm run build
```

Step 8 — Run the application:

```
php artisan serve
```

4.3 Default Admin Login After Seeding

Portal	URL	Username / Email	Password
Admin	/sp/login	superadmin or admin@hrm.com	112233

Portal users (provider/practice) are created through the Admin UI or CSV bulk import.

5. Login and Access

5.1 Admin Login

1. Open `/sp/login`
2. Enter admin email or username and password
3. You are redirected to `/admin/dashboard`

5.2 Provider and Practice Login

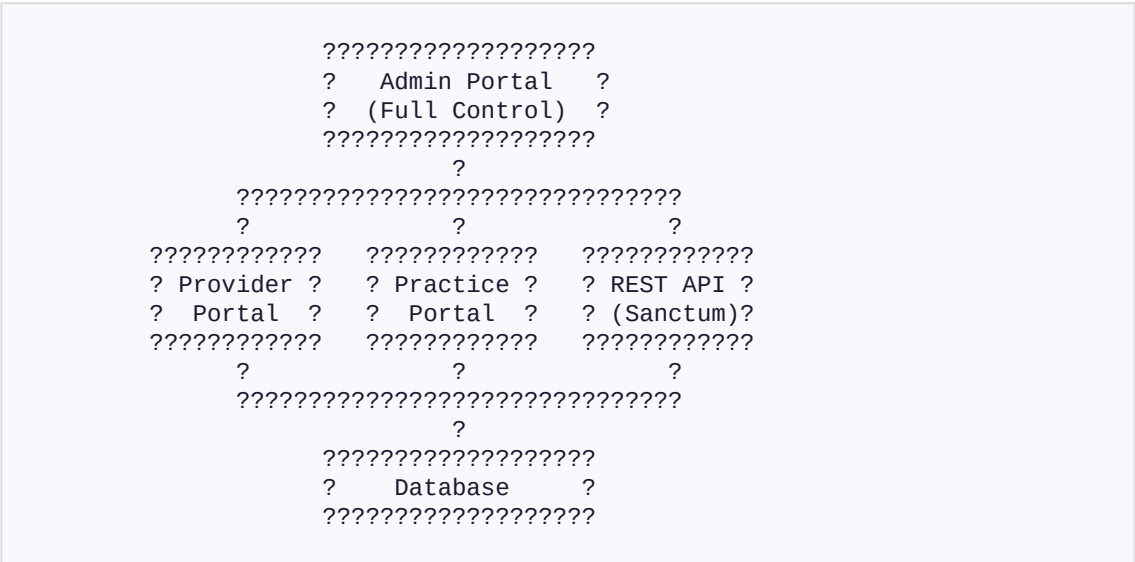

1. Open `/portal/login`
2. Enter email and password
3. Provider role ? `/provider/dashboard`
4. Practice role ? `/practice/dashboard`

5.3 Security

- Sessions stored in database
- CSRF protection on all forms
- Authentication middleware on all protected routes

6. System Architecture

6.1 Three Portals, One Database

6.2 Key Relationships

- A **User** links to one **Provider** OR one **Practice**
- A **Provider** can belong to many **Practices**
- A **Credentialing Case** links Provider + Practice + Payer + Status
- Each case has a checklist, tasks, emails, and SLA timers

6.3 Case Number Format

Auto-generated: **APP-2026-0001**

7. Admin Portal — Complete Module Guide

7.1 Dashboard (/admin/dashboard)

High-level KPIs: active cases, delay breakdown, overdue follow-ups, expiring documents, recent activity.

7.2 Providers Module

Page	URL	Purpose
List	/admin/providers	Search and filter providers
Create	/admin/providers/create	Add provider + portal login
Details	/admin/providers/{id}/show	Full profile, cases, documents
Edit	/admin/providers/{id}/edit	Update credentials

Key fields: NPI, CAQH, specialty, license, DEA, PECOS, malpractice, board certification.

7.3 Practices Module

Page	URL	Purpose
List	/admin/practices	All medical groups
Create	/admin/practices/create	New practice + portal login
Details	/admin/practices/{id}/show	Profile, contacts, locations
Edit	/admin/practices/{id}/edit	Update practice info

7.4 Provider–Practice Assignment (/admin/provider-practices)

Link doctors to practices. Required before creating cases for that combination.

7.5 Payers Module

Manage insurance companies and their per-state document requirements.
Requirements auto-build case checklists.

7.6 Credentialing Cases (</admin/credentials>)

Create a case — step by step:

1. Go to Credentials ? Create
2. Select Provider, Practice, Payer, Location
3. Choose Case Type, Priority, Assigned Admin
4. Save — case number and checklist are auto-created
5. SLA timers start based on status category

Download Packet: ZIP of all case documents from case detail page.

7.7 Documents Library (</admin/documents>)

Central file repository with versioning, expiry tracking, and filters.

7.8 Tasks — Kanban (</admin/tasks/kanban>)

Columns: Overdue, Due Today, Upcoming, Completed. Manual and SLA-generated tasks.

7.9 Email Center (</admin/emails>)

Send templated emails, log inbound mail, import attachments as documents.

7.10 Reports (</admin/reports>)

Report	Description
Open Applications	All active credentialing cases

Document Compliance	Checklist completion status
Case Aging	How long cases have been open
Expiring Documents	Documents nearing expiry
Productivity by Executive	Cases per assigned admin
Turnaround by Payer	Average time per payer
Upcoming Recredentialing	Cases due for renewal

7.11 Analytics (`/admin/analytics/productivity`)

Management dashboard: executive metrics, payer turnaround, recredentialing pipeline.

7.12 Bulk Import (`/admin/imports/bulk`)

CSV import for multiple providers with per-row error reporting.

7.13 Master Data

Page	Controls
<code>/admin/master/statuses</code>	Case workflow stages
<code>/admin/master/case-types</code>	New Application, Renewal, etc.
<code>/admin/master/delay-owners</code>	Delay responsibility categories
<code>/admin/master/priorities</code>	Critical through Low
<code>/admin/master/document-types</code>	W-9, License, DEA, etc.
<code>/admin/master/email-templates</code>	Merge-field email templates

8. Provider Portal

URL: /provider/* | Login: /portal/login

8.1 Pages

Page	URL	Description
Dashboard	/provider/dashboard	Stats, outstanding documents
My Applications	/provider/cases	Case status (read-only)
Upload Center	/provider/documents	View and upload documents
My Profile	/provider/profile	Profile view (read-only)

8.2 Upload Steps

1. Select application (case)
2. Choose document type
3. Enter title and select file (PDF/DOC/JPG, max 10MB)
4. Click Upload — checklist auto-updates

9. Practice Portal

URL: /practice/* | Login: /portal/login

9.1 Pages

Page	URL	Description
Dashboard	/practice/dashboard	Practice-wide stats
Applications	/practice/cases	All practice cases
Upload Center	/practice/documents	Upload for practice cases
Linked Providers	/practice/providers	Providers at this practice
Practice Profile	/practice/profile	Locations and contacts

10. Credentialing Case Workflow

10.1 Typical Lifecycle

Intake ? Document Collection ? Internal Review ? Submitted to Payer ? Payer Review
? Approved (or Denied)

10.2 Common Statuses

Status	Meaning
Not Started	Case created, work not begun
In Progress	Active work by Revantage team
Waiting on Provider	Provider must submit documents
Waiting on Practice	Practice must submit documents
Submitted to Payer	Sent to insurance company
Payer Review	Payer is processing
Approved	Credentialing complete

10.3 On Status Change

1. Status history saved
2. Activity log updated
3. Delay owner may auto-update
4. SLA timers synced

11. Documents and Checklists

1. Case created ? checklist seeded from payer requirements
2. Document uploaded ? matching checklist item marked received
3. Version history kept for all re-uploads
4. Expiry dates tracked — dashboard alerts at 30 days
5. Credentialing packet ZIP available from admin

12. Tasks and Kanban Board

Tasks link to cases and assigned admins. Kanban columns: Overdue, Due Today, Upcoming, Completed. SLA engine can auto-create payer follow-up tasks.

13. Email Center and Templates

Send templated outbound emails with merge fields (e.g. {{case_number}}). Log inbound emails and import attachments as documents. Templates managed at </admin/master/email-templates>.

14. SLA, Reminders, and Delay Ownership

14.1 Default SLA Rules

Rule	Days	Action
Internal review	2 business days	Reminder
Provider document request	3 days	Reminder email
Provider document request	7 days	Second reminder
Escalation	10 days	Escalate to manager
Payer follow-up	7 days	Create follow-up task

14.2 Daily Command

```
php artisan credentialing:run-sla-checks
```

Scheduled daily at 8:00 AM. Business days skip weekends and configured holidays.

15. Reports and Analytics

Seven CSV export reports plus live productivity dashboard. Global search in admin header finds providers (NPI/name), cases, and payers.

16. Bulk Import

Upload CSV with name, email, NPI, specialty. Default password if omitted:
ChangeMe123!. Per-row success/error report stored for audit.

17. API Access

Base URL: /api/v1

Method	Endpoint	Auth	Description
POST	/api/v1/auth/token	Web session	Create Sanctum bearer token
GET	/api/v1/provider/cases	Bearer token	Provider case list (JSON)
GET	/api/v1/provider/documents	Bearer token	Provider documents (JSON)

18. Roles and Permissions

Permission	Provider	Practice
portal.dashboard.view	?	?
portal.cases.view	?	?
portal.documents.view	?	?
portal.documents.upload	?	?
portal.profile.view	?	?
portal.providers.view		?
portal.locations.view		?

Seed: `php artisan db:seed --class=PermissionSeeder`

19. Database Overview

Table	Purpose
admins	Admin users
users	Portal users
provider_details	Provider profiles
practices	Practice profiles
credentialing_cases	Application records
case_document_items	Per-case checklist
documents / document_versions	File metadata
tasks	Follow-up tasks
email_messages	Email log
sla_rules / case_sla_timers	Automation

20. File Uploads and Storage

Type	Location
Documents	storage/app/public/documents/{id}/
Practice files	storage/app/public/practice-documents/
Portal limits	10 MB — PDF, DOC, DOCX, JPG, PNG

```
php artisan storage:link
```

21. Scheduled Jobs and Automation

Production crontab: `* * * * * php artisan schedule:run`

Daily at 8:00 AM: `credentialing:run-sla-checks`

22. Testing Guide

22.1 Admin Test Flow

1. Login as admin ? Create payer with document requirements
2. Create provider and practice ? Link them
3. Create credentialing case ? Upload document
4. Verify checklist updates ? Change status ? Export report

22.2 Portal Test Flow

1. Login as provider ? Upload document ? Verify in admin
2. Login as practice ? View linked providers ? Upload document

```
php artisan test
```

23. Deployment Checklist

- Set APP_ENV=production and APP_DEBUG=false
- Configure MySQL and mail settings in .env
- Run migrate, seed, storage:link, npm run build
- Set up cron for schedule:run
- Change default admin password
- Enable HTTPS

24. Glossary

Term	Definition
Credentialing	Verifying provider qualifications with a payer
Payer	Insurance company or health plan
NPI	National Provider Identifier
CAQH	Provider data registry used by many payers
PECOS	Medicare enrollment system
Recredentialing	Periodic re-verification by payers
SLA	Timed follow-up rules for case processing
Delay Owner	Party currently blocking case progress

25. Support and Maintenance

Command	Purpose
php artisan migrate	Apply database changes
php artisan db:seed	Load default data
php artisan credentialing:run-sla-checks	Run SLA manually
php artisan route:list	View all routes

Business Requirements:
